                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A60427

A60427

A60427

Macrophage cytotoxicity-inducing factor, 29K - human (fragment)

C)Species: Hemo sapiens (man)

C)Species: Hemo sapiens (man)

C)Accession: A60427

R)Construction: A60427

R)Construction: A60427

Exp. Hematol, 19, 764709, 1991

A)Title: Purification and amino acid analysis of a human macrophage cytotoxicity-inducin

A)Reference number: A60427; MUDD:91372885; PMID:1909970
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gastric juice peptide - human Cispeciaes (man) Cispeciaes Bono saties (man) Cispeciaes Bono saties (man) Cispeciaes 20 June 20

Jubilian beta-A chain - African clawed frog (fragment)
NyAlternate names: activin A; resoderm-inducing factor
C;Species: Kenopus laevis (African clawed frog)
C;Date: 18 Feb-: 994 #sequence_revision 18-Aug-2000 #text_change 18-Aug-2000
C;Accession: S19926
R;Smith, J.C.; Price, B.M.J.; van Nimmen, K.; Huylebroeck, D.
Nature 345, 729-731, 1990
A;Tible: Identification of a potent Xenopus mesoderm-inducing factor as a homologue of A;Reference number: $10926; MulD:90294906; PMID:2113615
A;Mocession: S10926
A;Molecule type: protein

PLACE PHYSIOL 97:366-374(1991).

-: FUNCTION: MAY PLAY A ROLLE IN ALITERING THE PROPERTIES OF CELL WALLS DURING GENETHATIVE GROWTH.

-: SCHUNIT: OLIGOMER (BELEVEDT O BE A PENTAMER BUT PROBABLY HEXAMER) (BY SIMILARITY).

-: SCHECELULAR LOCATION: SOLUBLE, MICROSOMAL AND CELL WALL FRACTIONS.

-: STECELULAR LOCATION: SOLUBLE, MICROSOMAL AND CELL WALL FRACTIONS.

-: TISSUE SPECIFICITY: ROLDS AND COLEOPTILE. IN ROOTS, PRESENT IN THE MATURE REGION. BUT NOT IN THE TIP. NOT DETECTED IN LEAVES.

-: INDUCTION: INCREABED BY SALT STRESS IN ROOTS AND DECREASED BY SALT STRESS IN GOLGOPTILE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                            The present invention describes an immunogen (1) comprising a peptide or its fragment. Also described are: (1) a vaccine comprising influenzae or its fragment. Also described are: (1) a vaccine comprising (i) and an excipient; (2) preparation of (1), comprising comprising a peptide to protein D or its fragment; and (3) preparation of a vaccine of (1), comprising formulating (1) with an excipient. (1) has cyrostatic, antialiergic, noctropic, neuroprotective and protozoacha activities. (1) and the vaccine are useful for the manufacture of a medicament for preventing and treating infectious diseases such as malaria or chronic disease such as cancer, Alzheimer's disease or allergy in a patient. Unlike prior art immunogens, (1) induces high levels of antipeptide carrier. The present sequence represents a specifically claimed minimize peptide sequence, which can be used in an immunogen of the
                                                             Immunogens and vactine comprising the immunogen useful for preventing and treating infectious diseases e.g. malaria and chionic disease e.g. cancer, comprises peptide and carrier from protein E of influenzae.

The present invention describes a peptide (I) comprising an isolated surface exposed group/epitope (EI) of C-epsilon-2 domain (D) of immunoglobulin E (192), or life mimotope. Also described are: (1) an immunoglobulin E (192), or life mimotopen. Also described are: (1) an immunoglobulin E (193), or life mimotopen (II); (2) a vaccine (III) for treating allergies comprising (II); (3) a ligand (IV) capable of recognising (IV); (1) a peptide (Ia) capable of being recognised by (IV); (6) an immunogen (IIa) comprising (Ia) and (7) producing (III) by producing (II). (1) can have antiallergic and immunosuppressive activities, and can be used as a vaccine and histamine release inhibitor. (I), (II) and (III) are useful in medicine and in the manufacture of medicaments for treating and preventing alisergies. (IV) is useful for identifying mimotopes of PI, in medicine and also in manufacture (IC) in dentifying mimotopes of PI, in medicine and also in manufacture for indentifying mimotopes of PI, in medicine and also in manufacture (IV) is dentifying mimotopes of PI, in medicine and also in manufacture (IV) is definity purification allergies. (I) is useful in diagnosing acopy. ABASS907 to ABASE099 represent the sequences which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                               Peptides useful for treating, preventing and ameliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin \mathbb E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide P15 derived as mimotope of Cepsilon2 region of human IgE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Hurun, linkage technology, conjugated compound, carrier vehicle, epitope, Cepsilon2, Cepsilon3, Cepsilon4, immunoglobulin E, IgE mediated disease, antibody response.

The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin E (IgE) suitable to be cyclised and used in the invention.
                         The present invention relates to a composition comprising allergy peptides linked by an inext carrier. The allergy peptides are derived from Immunoglobulin E (1gE) or IgE receptor. The present peptide is one such peptide from IgE. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunogen; human; IgE; immunoglobulin E; allergy; thio-ether linkage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              comprises

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  a
                                                                                                                                                                                                                                                                                                      Conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce

biological and immunological constructs. The invention provides a

method for inking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or minotopes of the invention describes peptides derived from or minotopes of the Cepsilon3 or Cepsilon4 regions of fuman immunoglobulin E (igE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manifacture of a medicament for the treatment of igE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to rulse a protective antibody response in an animal or human patient.

AAU16622-AAU16613 represent peptides derived from or mimotopes of the Cepsilon3/Cepsilon4 region of human 1gE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0

```
The present involution describes a periode. The control is soluted a surface exposed group/epitope (H) of C epitose in the D of immosphobuling C (186), or its mimotope (A) the control in the control of the control of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    in medicine and also in manufacturing medicaments for treating allergies. (1) is useful in diagnostics and in the affinity purification of circulating anti-IgE antibodies from blood (1), (11) and PC are useful for treating a patient suscepty, to a sifering from allergies. (IV) is also useful in diagnosing alony. AARLS907 or AAS26030 represent peptide sequences which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptides useful for treating, preventing and ameliocating allergic diseases, comprising an isolated surface exposed arrup of a specific domain from immunoglobulin {\bf E} -
                                                                                                                                                                                                                                                                                                                                                    Epitope, mimotope, human, immimoglobulin 8, 198, C-epsilon 2 domain;
allergic disease, immunoprophylaxis, immimotheraty, antiallergic,
imminosuppressive, vaccine, histamine release inhibitor, immimogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. marcomolectules, polymers, dendrimers, proteins) to produce bio.capical and imminological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the circular used to produce conjugated compounds. The compounds or controlled conjugated compounds. The compounds or controlled conjugation of a peptide epitope (antigen) to a liberate for the treatment of 1gB mediated diseases. The invention of a protein so as to form an immunogatic conjugate which may be able to raise a protective antibody response in an animal or human patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A linkage comprising an immunogenic conjugate useful treatment of :qE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò

surface exposed group/epitope [1]) of C-epilon-2 domain [3] of immunoglobulin E [19B], or its mimotope. Also described are: (1) an immunoglobulin E [19B], or its mimotope. Also described are: (1) an immunoglobulin E [19B], or its mimotope. Also described are: (1) an immunogen [1]; (1) a ligand [1]) (2) a vaccine [11]) for treating allergies comprising [1]; (1) a ligand [1]) (1) comprising [1] (1) [1] and [1]) [2] comprising [1] (2) comprising [1] (3) a ligand [4]); and (7) producing [1] (4); (6) an immunogen [1] (1] comprising [1] (1] by producing [1]. (1] and [1]) are a vaccine and histamine release inhibitor. (1), (11) and (111) are a vaccine and histamine release inhibitor. (1), (11] and (111) are and preventing allergies. (1V) is useful for identifying mimotopes of Pl, in medicine and also in manufacturing medicaments for treating and preventing anti-19E antibodies from blood. (1), (11] and PC are consequences [1] in diagnosing atopy. AAB25907 to AAB26099 represent in medicine which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptides useful for treating, preventing and ameliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a peptide (I) comprising an isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide P15p derived as mimotope of Cepsilon2 region of human IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         enwood J, Hewitt E, Lamont A, Mason S

                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. poptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimens, proteins) to produce the conjugation of constructs. The invention provides a retiod for linking an epitope (e.g. a peptide) to a carrier (e.g. a product for use in a pharmaceutical composition or a vaccine. The invention describes peptides desired form or a vaccine. The convection describes peptides desired for memorage of the formation describes peptides desired for memorage of the formation or compositions of the invention are useful in the manufacture of a medicament for the invention are useful in the manufacture of a medicament for the treatment of USF Fediated diseases. The intention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to traite a protective antibody response in an unifall or human patient.

Anile32-AA316911 represent peptides desired from or mirrotopes of the Cepsilon2/Gepsilon3/Cepsilon4 region of human case.

```
The present invention relates to conjugates suitable for use in vaccines, where the conjugate complises a disulphide bridge cyclised peptide and an ammunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from immunoglobulin E (1gE) suitable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

A linkage comprising an immunogenic conjugate useful treatment of 1gE

```
The present invention describes a peptide (I) compilising an isolated surface exposed group/epitope (E) of C-epsilon-2 domain (D) of imminoglobuline E(BE), or its minotope. Also described are: (1) an imminoglobuline E(BE), or its minotope. Also described are: (1) an imminogen (II) for treating allergies comprising (II); (3) a ligand (IV) capable of for treating allergies comprising (II); (3) a ligand (IV) capable of recognising (IV); (5) a peptide (Ia) capable of being recognised by (IV); (6) an imminogen (II) a peptide (Ia); and (7) producing (III) by producing (IV); (6) an imminogen (III) and ver antiallergies and in the manufacture of medicines and can be used as a vaccine and histamine release inhibitor. (I): (II) and can be used and preventing allergies. (IV) is useful for identifying minotopes of PI, in medicine and also in manufacturing medicaments for treating allergies. (IV) is useful in diagnostics and in the affinity purification of circulating anti-IgE antibodies from blood. (I): (III) and PC are cuseful for treating a patient susceptible to or suffering from allergies. (IV) is also useful in diagnosting atopy. AAMS5007 to AABS6099 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
               Fuptides useful for treating, preventing and ameliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin E -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Peptide Pist derived as mimotope of Gepsilon, responded human 1985

The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce biological and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The protein of for use in a pharmaceutical composition or a vaccine. The cinvention describes peptides derived from or mimotopes of the cepsilon? Cepsilon3 or Cepsilon4 regions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compositions of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient. AAU16631-AAU16913 represent peptides derived from or mimotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human 1gs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an almentogenic carrier. The vaccines can be used in the treatment of allergies. The piesent sequence is a peptide immunogen derived from human immunoglobulin E (19E) suitable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunogen, human, 198, immunoglobulin E; allergy, thio-ether linkage,
vaccine; antiallergic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gabs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 13, Application US/08162081B

Patent No. 5824492

GENERAL INFORMATION:

APPLICANT: Hises, Ian Donald; Fry, Michael John; Uhand, Pitu
APPLICANT: Baia; Waterfield, Michael Derek; Parker, Peter
APPLICANT: Stefano; Gout, Ivan Tarasovitch
TITLE OF INVENTION: POLYPERTIDES HAVING KINASE ACTIVITY,
TITLE OF INVENTION: THEIR PREPARATION AND USE
NUMBER OF SEQUENCES: 50
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         c.
